PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

## Office Action Summary

Application No.

10/603,835

Applicant(s)

IKENO, ATSUSHI

Examiner

David Faber

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 11 July 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-4, 6-13, 15-17 and 19-21 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4, 6-13, 15-17, and 19-21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This office action is in response to the amendment filed on 11 July 2007.
2. Claims 1, 4, 7, 9, 12, and 19-21 have been amended.
3. The objection to the drawings has been withdrawn necessitated by the amendment. The rejection of Claims 1-4, 6-13, 15-18, and 19-21 under 35 U.S.C. 112, second paragraph, has been withdrawn necessitated by the amendment. The rejection of Claims 1-4, 6-11, and 19-20 under 35 U.S.C. 101 has been withdrawn necessitated by the amendment.
4. Claims 1-4, 6-13, 15-17, and 19-21 are pending. Claims 1, 12, and 19-21 are independent claims.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-2, 4, 6, 8, 10, 12-13, 16, and 19 remain rejected under 35 U.S.C. 102(b) as being anticipated by Yanase et al (US PGPub 2001/0025288, published 10/27/2001).

As per independent Claim 1, Yanase et al discloses:

- Computer readable medium (Paragraph 0026)

- division pattern storing means for storing therein one or plural division patterns defining a predetermined character string said character string being represented in a division line; document dividing means for applying the one or plural division patterns stored in the division pattern storing means to the inputted electronic document to divide the electronic document to plural partial documents. (FIG 7-8; Paragraph 0080, 0084: Discloses news information in an electronic mail format containing line separators composed of characters, regarded as a separator for separating articles from one another within. These character lines are predetermined rules for separating. (Paragraph 0079-0080) Paragraph 0084 discloses an example using FIG 7 containing multiple character lines where the lines are used to separate the articles from each other. In addition, other division patterns are used to separate the title and the main body of text from within each of the separated articles. FIG. 8 shows the result of the method disclosure in Paragraph 0084.)
- labeling pattern storing means for storing therein plural labeling patterns provided with classification information pieces said classification information pieces defining a predetermined character string which specifies classification of a respective partial document; and labeling means for applying the labeling patterns stored in the labeling pattern storing means to respective partial documents obtained by the division conducted by the document dividing means, respectively, to provide the classification information pieces. (FIG 7-8;

Paragraph 0081-0084: Discloses other predetermined rules that determine, separate, and label the title of the article, text of the article and other information into a data structure. (Paragraphs 0079-0083, 0087) As stated in Paragraph 0084, predetermined character strings such as space lines specify a partial aspect of the document if it's a title or text of that article. For example, a section separated from an subsequent section with only one line (one predetermined character string) is regarded as the title of the article and a section separated from a subsequent section with a plurality of lines (another predetermined character string) is regarded as the text of the article. Thus, FIG 8 shows the result of labeling the title and text of the article based on the classification of the predetermined character strings in the document. FIG 10 discloses other information retained, labeling the information retained from the document format analysis, and stored in a data structure shown in FIG. 6, and described in Paragraph 0077.)

As per dependent Claim 2, Yanase et al discloses:

- wherein the division pattern storing means stores plural division patterns for an electronic document of one kind. (Paragraph 0084: Discloses multiple division patterns that determine patterns to separate articles of the document of one kind (i.e. email or magazine: Paragraph 0063) that is inputted.)

As per dependent Claim 4, Yanase et al discloses:

- wherein the division pattern storing means stores the one or more division patterns (a searching division pattern) so that, when discrimination has been made to the inputted electronic document, within a predetermined line from a line coincident with the division pattern (a searching division pattern), there is not a line coincident with another division pattern, the line coincident with the division pattern (a searching division pattern) is defined as the division line. (Paragraph 0084: An embodiment of a news information by electronic mail in which a document format analysis is performed according to the predetermined rules (Paragraph 0079-0083)) When lines of the same character code appear consecutively, and match a predetermined rule, the lines are regarded as separators, and thus division lines.)

As per dependent Claim 6, Yanase et al disclose:

- wherein the labeling pattern storing means stores plural labeling patterns for an electronic document of one kind. (Since Paragraph 0084 discloses multiple division patterns that not only determines separate articles, but also the main body text and the title of each article. Once determining the division of the sections, the method is able to label an individual article, the text of the article, and the title of the article. Paragraph 0081-0083 discloses example of predetermined rules used for division purposes, but also used for labeling.)

As per dependent Claim 8, Yanase et al discloses:

- wherein the labeling pattern includes the same pattern as the division pattern.  
(Paragraph 0079-0084: Paragraphs 0079-0083 disclose an example of predetermined rules that is determines the separation of multiple articles from each other, and able to locate the title, main text, and links. Not only the process is able to locate each of these components, these rules are also used for labeling the component explained in Paragraph 0084 and shown in Figures 8 and 10.)

As per dependent Claim 10, Yanase et al discloses:

- division pattern producing means for recognizing existence of plural lines including similar character strings in similar positions in the electronic document inputted to produce the division pattern and register the same in the division pattern storing means. (Paragraph 0084, Figs. 7-8: Paragraph 0084 discloses the example of separating two articles from each other. It is able to locate and determine the multiple line separators to break down the text, then able to read the number of space lines of broken-down sections to determine the title and text by the number of lines separating from a subsequent section. Then the title and text is paired together and viewed as one article. FIG 7 shows the example used, with FIG 8 the result from the disclosure of Paragraph 0084.)

As per independent Claim 12, Shimada et al discloses a method:

- a document dividing step of applying one or plural division patterns defining a predetermined character string said character string being expressed in a division line to the electronic document inputted to divide the electronic document to plural partial documents and a labeling step of applying labeling patterns provided with classification information pieces said classification information pieces defining a predetermined character string which specifies classification to the respective partial documents obtained by the division conducted in classification to the respective partial documents obtained by the division conducted in the document dividing step by providing the classification information pieces to the respective partial documents. (FIG 7-8; Paragraphs 0080, 0084: Discloses news information in an electronic mail format containing line separators composed of characters, regarded as a separator for separating articles from one another within. These character lines are predetermined rules for separating. (Paragraph 0079-0080) Paragraph 0084 discloses an example using FIG 7 containing multiple character lines where the lines are used to separate the articles from each other. In addition, other division patterns are used to separate the title and the main body of text from within each of the separated articles. As stated in Paragraph 0084, predetermined character strings such as space lines specify a partial aspect of the document if it's a title or text of that article. For example, a section separated from an subsequent section with only one line (one predetermined character string) is regarded as the title of the article and

a section separated from a subsequent section with a plurality of lines (another predetermined character string) is regarded as the text of the article. Thus, FIG 8 and 10 shows the result of labeling the title and text of the article based on the classification of the predetermined character strings in the document.)

As per dependent Claim 13, Claim 13 recites similar limitations as in Claim 4 and is similarly rejected under Yanase et al.

As per dependent Claim 16, Claim 16 recites similar limitations as in Claim 10 and is similarly rejected under Yanase et al.

As per dependent Claim 19, Yanase et al disclose:

- A computer readable medium in which the information partitioning program according to claim 12 has been recorded. (Paragraph 0128: Discloses various storage medium used for recording)

### ***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 3 and 7 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Yanase et al (US PGPub 2001/0025288, published 10/27/2001).

As per dependent Claim 3, Yanase et al discloses the separating of news articles in an electronic mail format (Paragraph 0084), but fails to specifically disclose the division pattern is be applied regardless of the kind of an electronic document. However, in Paragraph 0076, Yanase et al discloses that the conversion of extracting text from an article in printed matter into an electronic document with the use of OCR. In addition, Yanase et al discloses document format is assumed during the document format analysis (The separating of multiple articles from each other. Example disclosed in Paragraph 0084), format conversion to the specific document format can be included and executed. It was well-known to one of ordinary skill at the time of applicant's invention that an electronic document, in an Adobe PDF, containing news articles could be attracted by an OCR to be converted into a document form understandable by Yanase et al's method enabling Yanase et al's document format analysis performed to separated articles from each other using line separators, and be able to determine the title and text of the article, and labeling the title and text of the article shown in FIG 8. (Paragraph 0084)

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to have combined Yanase et al's method with the disclosure above since it would have provided the benefit of allowing any type of document, electronic or printed, to have extracted useful news information to the user without accessing a specific source each time.

As per dependent Claim 7, Claim 7 recites similar limitations as in Claim 3 and is rejected under rationale. Furthermore, Yanase et al's method not only is able to separate articles using character-coded line separators and able to determine the title and text of the article, but it is able label the title and text of the article shown in FIG 8 (Paragraph 0084) applied to any inputted electronic document recognized through the process disclosed in Claim 3.

9. Claims 9, 11, 15, 17, 20 and 21 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Yanase et al (US PGPub 2001/0025288, published 10/27/2001) in further view of Kobayashi et al (US PGPub 2003/0007397, filed 5/10/2002).

As per dependent Claim 9, Yanase et al discloses their method is able to determine the inputted document is either electronic mail (electronic document) or printed matter, (paper document)), thus able manage different kinds of documents inputted (Paragraph 0063, lines 7-11) and that the document format of news information is already determined. (Paragraph 0073, lines 5-8) However, Yanase fails to specifically disclose discriminate patterns for discriminating the kind of the electronic document inputted. On the other hand, Kobayashi et al discloses the ability to determine the format of the document by the character type of the input text data. (FIG 5; Paragraph 0106-116) Kobayashi et al's method is able to determine if the text data is in HTML format, (document in HTML) XML format (document in XML) (Paragraph 0109), or an email message. (electronic mail document) (Paragraph 0111)

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to have combined Yanase et al's method with Kobayashi et al's method since Kobayashi's method would have made Yanase et al's method capable of unitarily processing e-mails and HTML documents, and further to provide a recording medium for use within.

As per dependent Claim 11, Yanase et al discloses receiving news by electronic mail, a plurality of articles that include a plurality of topics distributed at one time, but fails to specifically disclose that the electronic mail is a mail magazine. However, Kobayashi et al discloses an extended e-mail system of mail magazines that is capable of transmitting the same information to multiple destinations at once in which the email contains large amount of information being advertisements and bodies of text.

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to have combined Yanase et al's method with Kobayashi et al's method since Kobayashi's method would have made Yanase et al's method capable of unitarily processing e-mails and HTML documents, and further to provide a recording medium for use within

As per dependent Claim 15, Yanase et al discloses a method:

- the document dividing step performs dividing to partial documents using the discriminated division patterns for document kind, and the labeling step provides the classification information pieces using the discriminated labeling patterns for the document kind. (Paragraph 0084: Discloses multiple division patterns that not only to determine and separate multiple articles from one

another, but also the main body text and the title of each individual article.

Once determining the division of the sections, the method is able to label an individual article, the text of the article, and the title of the article. Paragraph 0081-0083 discloses example of predetermined rules used for division purposes, but also used for labeling.)

However, Yanase et al fails to specifically disclose comprising a document kind discriminating step of discriminating the kind of the electronic document inputted. On the other hand, Kobayashi et al discloses the ability to determine the format of the document by the character type of the input text data. (FIG 5; Paragraph 0106-116) Kobayashi et al's method is able to determine if the text data is in HTML format, XML format (Paragraph 0109), or an email message. (Paragraph 0111)

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to have combined Yanase et al's method with Kobayashi et al's method since Kobayashi's method would had made Yanase et al's method capable of unitarily processing e-mails and HTML documents, and further to provide a recording medium for use within.

As per dependent Claim 17, Claim 17 recites similar limitations as in Claim 11 and is similarly rejected under Yanase et al and Kobayashi et al.

As per independent claim 20, Claim 20 recites similar limitations as in Claim 1, and 9 combined and is similar rejected under rationale.

As per independent claim 21, Claim 21 recites similar limitations as in Claim 9, and 15 combined and is similar rejected under rationale.

### ***Response to Arguments***

10. Applicant's arguments filed 11 July 2007 have been fully considered but they are not persuasive.

11. On pages 11-12, in regards to Claim 1, Applicant argues that Yanase fails to specifically disclose the limitation document dividing means for applying the one or plural division patterns stored in the division pattern storing means to the inputted electronic document to divide the electronic document to plural partial document stating that Yanase does not divide the inputted electronic document into "plural partial documents". However, the Examiner disagrees.

Yanase discloses a process of article division of news information inputted via electronic mail (document) into individual articles (partial documents). (Paragraph 0059, 0062) Furthermore, in FIG 7-8 and Paragraphs 0080, 0084, Yanase discloses news information in an electronic mail format containing line separators composed of characters, regarded as a separator for separating articles from one another within. These character lines are predetermined rules for separating. (Paragraph 0079-0080) Paragraph 0084 discloses an example using FIG 7 containing multiple character lines where the lines are used to separate the articles from each other. Thus, the character lines separated a document containing many articles into partial documents wherein each article is its own partial document.

12. On pages 11-12, in regards to Claim 1, Applicant argues Yanase fails to specifically disclose the limitation labeling means for applying the labeling patterns stored in the labeling pattern storing means to the respective partial documents obtained by the division conducted by the document dividing means, respectively, to provide the classification information pieces. However, the Examiner disagrees.

Yanase discloses other predetermined rules determine, separate, and label the title of the article, text of the article and other information into a data structure. (Paragraphs 0079-0083, 0087) As stated in Paragraph 0084, predetermined character strings such as space lines specify a partial aspect of the document if it's a title or text of that article. For example, a section separated from an subsequent section with only one line (one predetermined character string) is regarded as the title of the article and a section separated from a subsequent section with a plurality of lines (another predetermined character string) is regarded as the text of the article. Thus, FIG 8 shows the result of labeling the title and text of the article based on the classification of the predetermined character strings in the document. FIG 10 discloses other information retained, labeling the information retained from the document format analysis, and stored in a data structure shown in FIG. 6, and described in Paragraph 0077.)

13. On pages 12-13, in regards to claims 2 and 6, Applicant argues that Yanase fails to disclose the limitation wherein the storing pattern storing means stores plural division patterns for an electronic document of one kind and labeling pattern storing means

stores plural labeling patterns for an electronic document of one kind. However, the Examiner disagrees.

Yanase discloses inputting a document of one kind (i.e. email, or magazine: Paragraph 0063) wherein multiple division patterns determine patterns to separate articles contain within that document. (FIG 4, Paragraph 0080,0084) In addition, patterns to separate and determine the main body text and the title of each article as plural labeling patterns of a section separated from an subsequent section with only one line (one predetermined character string) is regarded as the title of the article and a section separated from a subsequent section with a plurality of lines (another predetermined character string) is regarded as the text of the article. Paragraph 0080 discloses of a different separator for separating articles from each other which also identifies one article from another which is labeled after separating shown in Figs 10 and 11. Thus, Yanase discloses the limitations of claim 2 and 6 since it performs these functionalities for each document inputted either being an email or a magazine.

14. On page 13, in regards to Claim 10 and 16, Applicant argues that Yanase fails to specifically disclose division pattern producing means for recognizing existence of plural lines including similar character strings in similar positions in the electronic document inputted to produce the division pattern and register the same in the division pattern storing means. However, the Examiner disagrees.

Paragraph 0084 of Yanase discloses the example of separating two articles from each other. It is able to locate and determine the multiple line separators to break down

the text, then able to read the number of space lines of broken-down sections to determine the title and text by the number of lines separating from a subsequent section. (Paragraph 0084, Figs. 7-8) Then the title and text is paired together and viewed as one article. FIG 7 shows the example used, with FIG 8 the result from the disclosure of Paragraph 0084. Thus, once its able to determine the division pattern of producing/separating the first article from the inputted document, it repeats the process of separating all the rest of the articles from the inputted document the same exact method/pattern. Thus, Yanase discloses the ability to produce a division pattern for one article from the document and use that same division pattern throughout the rest of the document.

15. On page 14, in regards to Claims 3 and 7, Applicant argues Yanase fails to specifically discloses the limitation division pattern can be applied regardless of the kind of an electronic document wherein Applicant argues does not mention different types of electronic documents. However, the Examiner disagrees.

Yanase discloses separating articles of news information from an e-mail or magazines containing news information that was inputted wherein e-mails, magazines etc are viewed as documents. Thus, Yanase disclose breaking/separating portions of an electronic document of more than one type of document. (e.g. Abstract, 0011)

16. On pages 14-15, in regards to claims 9, 11, 15, 17, 20 and 21, Applicant argues that Kobayashi fails to disclose the claim limitation document kind discriminating means

for referencing to the stored discrimination patterns to discriminate the electronic data inputted as required by the claims. However, the Examiner disagrees.

Yanase discloses the ability to receive more information from more than one form and more than one source. Since Yanase is able to read the news information from an electronic mail format and a magazine format (printed matter), it knows the format of the document and how to manage different formats (electronic mail or printed matter) when separating the document as its being inputted or it wouldn't be able to function properly. However, Yanase fails to specifically disclose discriminate patterns for discriminating the kind of the electronic document inputted. A feature within Kobayashi et al enables the ability to determine the format of the document by the character type of the input text data. (FIG 5; Paragraph 0106-116) Kobayashi et al's method is able to determine if the text data is in HTML format, XML format (Paragraph 0109), or an email message. (Paragraph 0111). Kobayaski et al discloses a character-type determining unit that reads the inputted text stored in the document, and able to determine the markup language or the text format of the text. Since Kobayski is able to recognize the format through the character-type determining unit since the unit knows what tags are in the HTML or XML format or an email, it references to the discriminating patterns stored. Thus, Kobayaski et al is able to read the "discriminating patterns" to determine the electronic document inputted. Therefore, Kobayaski et al cures the deficiencies of Yanase et al.

***Conclusion***

**17. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Faber whose telephone number is 571-272-2751. The examiner can normally be reached on M-F from 8am to 430pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong, can be reached on 571-272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
